#### **EXPERIENCE**

Technical Analyst, Information Advantage, info-advan.com

2001-Present

# Responsibilities

Work with clients to understand business processes. Design, implement, test, and maintain systems that meet the business's needs.

Use Python, Twisted, JavaScript and SQL to build systems that automate business processes.

#### **Successes**

Monitoring application for order completion. The app uses JavaScript, HTML Canvas, and Twisted Web to display summary data and allow the user to drill down to detailed data.

Python templating libraries to generate PostScript and ZPL

Rules engine to calculate the warning labels required on shipments. These rules are available as a web service, and through a single-page web application. The system has unit and regression tests in Python, and a full suite of Selenium tests.

Wireless warehouse management system

## **SKILLS**

Python	JavaScript	French
Twisted	PostScript	Web services
Linux/Windows/OS X	Testing	Selenium
Business process analysis	SQL	Learning

### **COMMUNITY**

Founder and coordinator, Fox Valley Python User Group <u>@foxpython</u>
